SEPTEMBER 2008

## 1. New contract seating collection

do+ce's new contract seating collection includes up to five new models of chairs:

### **BERLIN**

**Design: Burkhardt Dammer**

Stackable chair with a chrome-plated or epoxy-painted, metal cantilever structure. The one-piece seat and backrest are made in oak plywood, directly rested on the cantilever base.

### **CLAP**

**Design: Enrique Martí.**

With its personal and well-defined shapes, CLAP appears as the perfect match for the CLIP table collection. Rounded, elegant and of generous proportions, its unique character and personality make it equally ideal for combining with allsorts of furniture or in the most varied decoration settings. Its structure in curved, tubular steel and its seat and backrest in upholstered, faced board, provide CLAP with the maximum comfort, elegance, quality and distinction. Also available in an armchair version.

### **CLEO**

**Design: Enrique Martí**

With its basic, almost minimalist shapes, CLEO stands out for its extreme lightness, its sober elegance and perfect comfort, presenting a well-balanced aesthetic whole which is emphasized by its 'floating' seat, suspended over a metallic base. Made with a curved steel metallic structure and an oak-faced board or upholstered seat. Available in a stackable chair version or as an armchair.

**do | ce**

## TON

### Design: Enrique Martí

Light, ethereal, almost transparent – TON is a chair able to dignify to the utmost a material typically used in outdoor furniture. Its flexible and resistant polyester-grid seat and backrest make it especially comfortable and durable thanks to its particular mechanical qualities. Its thermo sealed seams and fireproof, antibacterial and UV-resistant treatments, together with its easily-cleaned surface make this chair the ideal option for any sort of space, whether interior or exterior, guaranteeing the maximum quality. A curved steel structure completes this light composition of rounded, harmonious lines, with undeniable personality and singularity. Also available in a *stamskin*-covered luxury version.

## ROC

### Design: Ricard Vila

A light, stackable chair made with stainless steel tube and thermo sealed polyester-grid, slipped directly onto the chair's structure, hence making this a part of the structure itself. It offers the same qualities, materials and finishes as the TON chair.

do+ce includes many more furnishing items in its product catalogue suitable for contract purposes, such as tables, chairs or armchairs. This is the case, for instance, of the chair models BATUA, KATYA, LORCA, MARGOT or NUVOLA.

1

2

3

1. LORCA chairs and TIM tables, both designed by Ricard Vila.
2. KATYA chairs, designed by Gemma Bernal & Associats, together with ALPI tables, by do+ce.
3. MARGOT chairs, designed by Margarita Viarnès and TIM tables by Ricard Vila.
